

Case study: How does a bike-share navigate speedy success?

Google Data Analytics Certificate Program

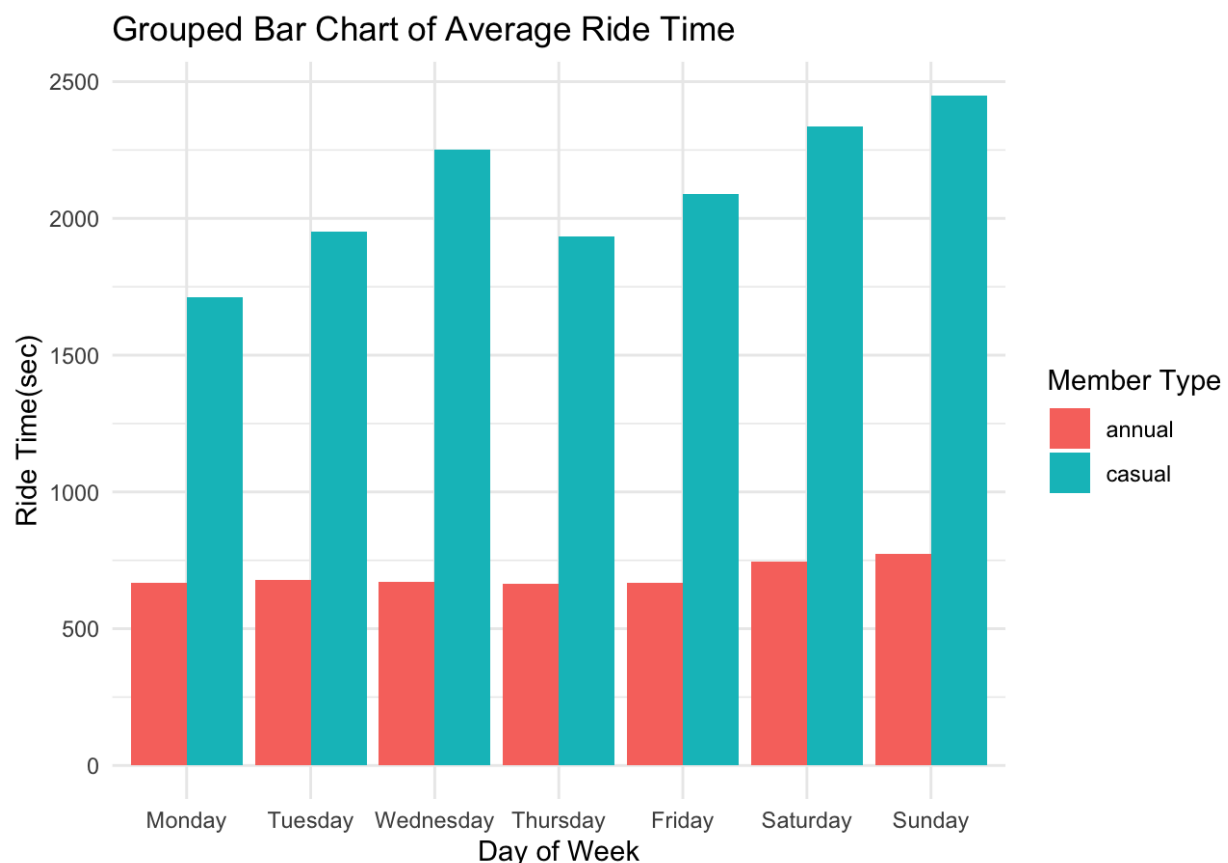

Business Task:

To determine how to maximizing the number of annual memberships by understanding how casual riders and annual members use Cyclistic bikes differently and using this information to develop a marketing strategy to increase annual membership.

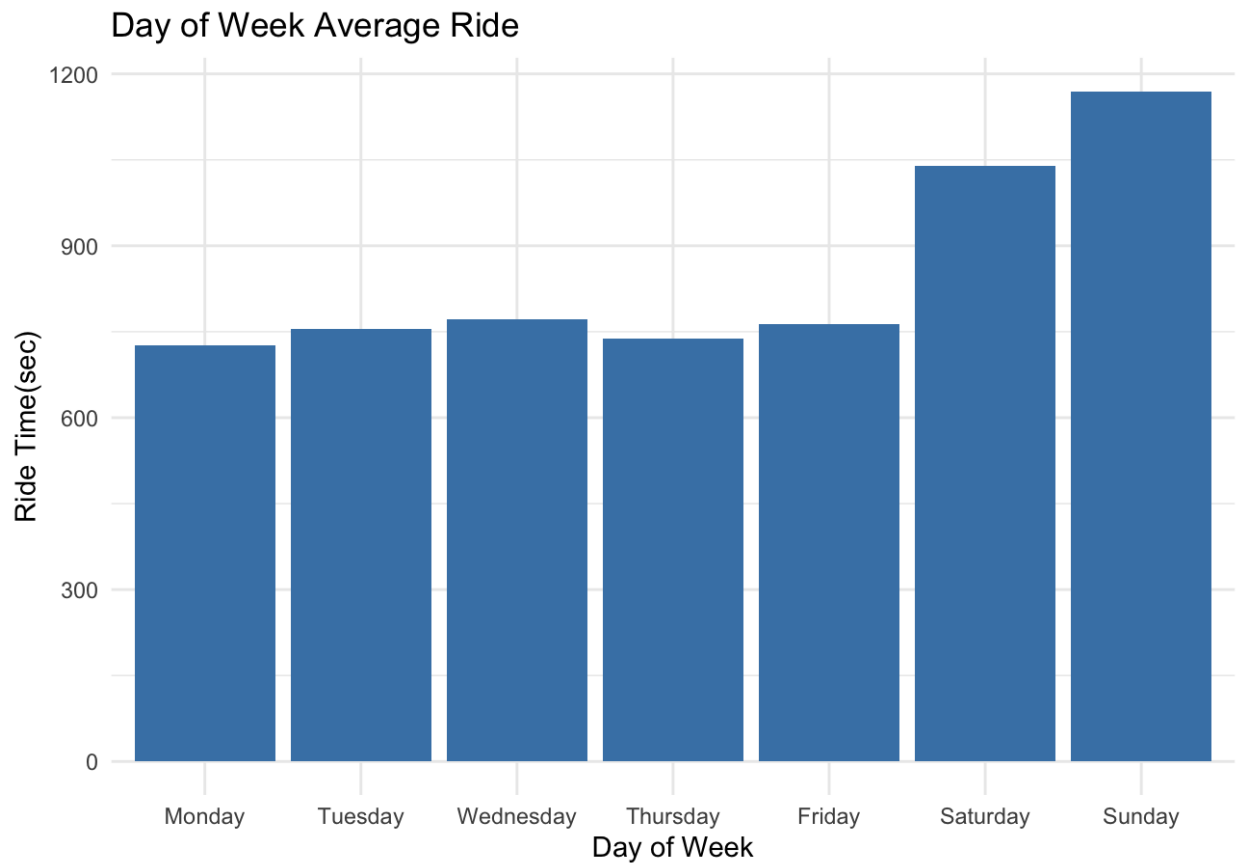

Key Findings & Visualizations:

Based on the analysis, here are the key findings.

- 1) Casual members on average have higher ride lengths than annual members.

- 2) Saturday and Sundays on average have the highest ride length for both casual and annual members

Top 3 Recommendations:

1) **Weekend-Focused Membership Campaigns**

With ride lengths peak on weekends for all users, Cyclistic should prioritize marketing campaigns on Saturdays and Sundays when rider engagement is the highest.

2) **Longer Rides = Better Rates with Annual Membership**

Use data-driven messaging to show that riders who take longer trips—particularly casual riders—can gain greater value and cost savings through annual memberships. Highlighting lower-cost long rides averaged out annually.

3) **Create Weekend-Only Membership Trials or Bundles**

Introduce short-term or weekend-specific membership trials that allow casual riders to experience the benefits of membership during peak usage periods. By lowering the commitment barrier and aligning the offer with high ride-length weekends, Cyclistic can encourage casual riders to transition into full annual memberships after experiencing added value.
